答: e

D 52

A 35-year-old man complained of a sudden onset of severe headache. For the past two weeks, he woke up around 3 : 00 a.m. due to soreness behind the left eye. His pain continued for about an hour. Today, he visited the emergency department at 5 : 30 a.m.

His consciousness was clear, but he appeared restless. His body temperature was 36.4 °C. Pulse rate was 84/min. Blood pressure was 136/80 mmHg. Conjunctival hyperemia and tearing of the left eye were observed. There were no meningeal signs. MRI and MRA of the head showed no abnormalities.

What is the most likely diagnosis?

- a migraine
- b meningitis
- c brain tumor
- d cluster headache
- e subarachnoid hemorrhage

答: d
